Spellbinding shelf standout for Halloween 2022

Seasonal and holiday celebrations are times for taking your packaging creativity to the next level. And rigid rPET is one of the best, most versatile packaging materials around to help your products shine on-shelf.

rPET can be thermoformed into just about any *spooky* shape imaginable. In-fact imagination IS your only limit!

Benefits of our rigid rPET packaging:

- Extends product life
- Impact-resistant
- Moisture-resistant
- Single or multi-cavity for many parts, to optimise perfect product protection
- Tamper-proof
- Can be made with up to 100% recycled content
- Lightweight and cost effective for transport
- Lower carbon footprint
- 100% recyclable

Suitable for a wide range of products, our rigid rPET packaging solutions are highly affordable, mono-material and lightweight packaging options which cost less to transport and are easy to recycle again and again. It actually takes far less energy to produce thermoformed rPET than any other packaging material, which means it has one of the lowest carbon footprints, and our ability to down-gauge means we can do more with less!

Our in-house creative *wizards* are ready and waiting to help you *conjure* up your bespoke 2022 Halloween packaging requirements. It doesn't matter if you think it might be a *nightmare*, WE love a challenge so don't be *frightened* to ask!

An integrated development area means that we can produce one-off resins and samples so that you can see your design concept in all its *ghoulish* glory.

And our wicked range of machines allow us to supply you with both minimal to *monster* seasonal volumes.
